## SUMMARY

---

Full-Stack Developer with a Computer Science background and hands-on experience building scalable backend systems and responsive web applications using Java, Spring Boot, and React. Proven ability to design RESTful APIs, integrate message-driven architectures with Apache Kafka, and manage relational and NoSQL databases. Comfortable across the stack — from Spring Boot microservices to React frontends — and eager to contribute to product teams building reliable, production-grade software.

## TECHNICAL SKILLS

---

**Languages & Frameworks:** Java, JavaScript, SQL | Spring Boot, Maven

**Frontend & Backend:** React, HTML, CSS, Tailwind CSS | Spring Security, Apache Kafka, WebSocket

**Databases & Tools:** PostgreSQL, MySQL, MongoDB, H2 | Git, GitHub, Docker, AWS

## EXPERIENCE

---

**JPMorgan Chase — Software Engineering Virtual Experience (Forage)**

Mar 2026 – Apr 2026

*Backend Developer (Virtual)*

*Remote*

- Integrated Apache Kafka with a Spring Boot microservice to consume and deserialize high-volume transaction messages using configurable topics and an embedded Kafka test framework.
- Implemented transaction validation and persistence logic using Spring Data JPA and H2, including entity modeling, balance updates, and external Incentive API integration via RestTemplate.
- Developed a REST endpoint for querying user balances through a Spring controller and verified end-to-end reliability across messaging, database, and API workflows using Maven test suites.

## PROJECTS

---

**Task Management System** | *Spring Boot, React, TypeScript, PostgreSQL, Docker, REST APIs*

GitHub

- Engineered a full-stack task management application with a Spring Boot backend exposing RESTful APIs for task creation, assignment, and status tracking across user workflows.
- Built a React TypeScript frontend with type-safe component architecture, integrating seamlessly with backend APIs to deliver a responsive and dynamic user interface.
- Containerized PostgreSQL using Docker Compose for reliable persistent storage, enabling a reproducible local development environment with clean service separation.

**Realtime Messaging Platform** | *Spring Boot, WebSocket, JavaScript, HTML, CSS*

GitHub

- Built a real-time multi-user chat application using Spring Boot and WebSocket, enabling low-latency bi-directional communication with server-side message broadcasting to all connected clients.
- Designed backend session management and WebSocket endpoint routing to handle concurrent users reliably, paired with a responsive HTML/CSS/JavaScript frontend for instant message delivery without page reloads.

## CERTIFICATIONS

---

**Skyscanner — Front-End Software Engineering Job Simulation**

2026

*Forage*

*Verified*

**Commonwealth Bank — Introduction to Software Engineering Job Simulation**

2026

*Forage*

*Verified*

## EDUCATION

---

**Dr. M.G.R. Educational and Research Institute**

Chennai, Tamil Nadu

*Bachelor of Technology, Computer Science Engineering — CGPA: 8.48*

*Nov 2021 – Jun 2025*
